

HYDRAULIC SPILLS

Recommended Uses

This special turf program helps to remediate the effects of hydraulic spills by breaking down the contaminant in the soil and bringing back the natural health and color of the affected grass.

Application

Mix the following ingredients to cover each area to be treated:

Product Mix	Per 1,000 sq ft (per 100 sq m)	Per Acre (per Hectare)
Water	5 gallons (20 L/100 m ²)	50 gallons (500 L/ha)
KLEENUPTM	2 ounces (70 mL/100 m ²)	2 quarts (5 L/ha)
SURF-MAX®	1 ounce (35 mL/100 m ²)	1 quart (2.5 L/ha)
BREAKOUT®	3 ounces (105 mL/100 m ²)	1 gallon (10 L/ha)
TURFPLEX® VII	3 ounces (105 mL/100 m ²)	1 gallon (10 L/ha)

Saturate the turf grass and soil with this mixture. Repeat every 7 to 10 days for at least 4 applications and test the soil to see if additional applications are needed. Continue until the problem is alleviated.

Benefits

- This application treats the soil as well as the toxic material in the soil by stimulating microbial activity that attacks the hydraulic oil residues and digests them, changing their molecular structure so that they are no longer toxic.
- Also provides the nutrients and stimulants needed to help grass recover.

Products contain **Micro Carbon Technology®**, a proprietary blend of very small organic molecules that allow for more effective absorption of nutrients by plants.
